Degree programme	Master Nanoscience and Nanotechnology
Course title, Topic	General chemistry (incl. laboratory course)
Subtitle (optional)	5
Module ID	GChem
Specialization	
Responsible lecturer	Prof. Dr. Schönherr
Teaching type	Lecture, tutorial, Lab-course
Relation to curriculum	mandatory basic module for students with a B.Sc. in Physics or a B.Sc. in Engineering
Semester	1
Credit points (CP)	6
Workload	Lecture: 30 h, tutorial: 30 h, 60 h Lab course, homework time: 60 h
Prerequisites for participation	None

Lars Birlenbach

birlenbach@chemie.uni-siegen.de

2

Learning outcomes / Competences	The students know the fundamental concepts of chemistry (e.g. structure-property relationships, donor-acceptor concept) and possess fundamental knowledge on the constitution of matter and laws of chemistry. They possess fundamental understanding of industrial chemical processes and chemical processes in nature. They are further accustomed to the main models in chemistry, they are able to observe, analyze, interpret and adequately report and summarize in written form dedicated natural phenomena. They possess fundamental competences in the planning, execution, analysis and evaluation of chemical experiments, they master fundamental techniques of chemical and analytical laboratory work. Their handling of chemicals is safe and adequately cautious.	3
Course description	Principles of general chemistry. Atomic theory, electronic structure and properties of atoms, periodic table, ionic, covalent and metallic bonding, molecular orbitals, structures of molecules, chemical formulas, reaction equations, stoichiometry, energy balance of chemical reactions, chemical kinetics, chemical equilibrium, acids and bases, acid-base equilibria, gasses, liquids and solids, phase equilibria, solutions, electrochemistry,	
Interdisciplinary qualifications	Ability to think in terms of abstract concepts, recognition of complex problems, application of advanced knowledge and skills in inter- and trans-disciplinary discussion of complex issues, debating and discussing in English, ability to work in a team, organization of a lab workplace.	
Assessment method (Contribution)	Exam credits: Written examination (50%), lab course and tutorial (50%). Both parts must be passed separately.	
Literature	Chemistry: The Central Science with Mastering Chemistry, Global Edition. Brown, LeMay, Bursten, Murphy, Woodward	

## Schedule

- Lecture: Thursday 14:15 , AR-H100
- Tutorial/Exercise: Tuesday 14:15, AR-H100
- Safety instruction for Lab Course: Thursday, Oct 19<sup>th</sup>, AR-H100, 14:15
- Lab Course: Monday, 13:00 – 18:00
- Start: October 23<sup>th</sup>

## Atomic Theory

- What does matter consist of?
- What do atoms consist of?
- What properties do atoms have?

## Structure of atoms: Millikan's experiment

# Rutherfords Experiment

9

### Mass and charge of subatomic particles

particle	mass in kg	charge in Coulomb
<b>Elektron</b>	$9,10938 \cdot 10^{-31}$	$-1,6022 \cdot 10^{-19}$
<b>Proton</b>	$1,67262 \cdot 10^{-27}$	$1,6022 \cdot 10^{-19}$
<b>Neutron</b>	$1,67493 \cdot 10^{-27}$	0

How to get to masses which can be used in the lab?

### Definition of a useful conversion factor

- Molar amount  $n$ : Number of particles, unit Mol  
 $1 \text{ Mol} = 6,022 \cdot 10^{23}$  particles
- 1 Mol has as many particles as 12 g of  $^{12}_6\text{C}$  (defined)
- Molar Mass  $M$ : Mass of 1 Mol of particles, unit g/mol

## Properties of electrons

- So, what do we know of electrons?

Lars Birlenbach

birlenbach@chemie.uni-siegen.de

12

## Electrons behave as particles

**Active Figure 4-15** The photoelectric effect. When electromagnetic radiation of sufficient minimum energy strikes the surface of a metal (negative electrode or cathode) inside an evacuated tube, electrons are stripped off the metal to create an electric current. The current increases with increasing radiation intensity. Visit this book's companion website at [www.cengage.com/chemistry/whitten](http://www.cengage.com/chemistry/whitten) to test your understanding of the concepts in this figure.

**TABLE 6.5**

The complete hydrogenlike atomic wave functions for  $n = 1, 2,$  and  $3$ . The quantity  $Z$  is the atomic number of the nucleus, and  $\sigma = Zr/a_0$ , where  $a_0$  is the Bohr radius.

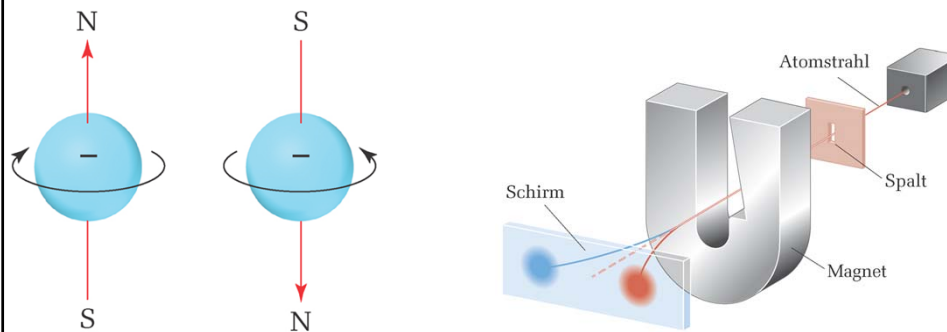

$n = 1,$	$l = 0,$	$m = 0$	$\psi_{100} = \frac{1}{\sqrt{\pi}} \left(\frac{Z}{a_0}\right)^{3/2} e^{-\sigma}$
$n = 2,$	$l = 0,$	$m = 0$	$\psi_{200} = \frac{1}{\sqrt{32\pi}} \left(\frac{Z}{a_0}\right)^{3/2} (2 - \sigma)e^{-\sigma/2}$
	$l = 1,$	$m = 0$	$\psi_{210} = \frac{1}{\sqrt{32\pi}} \left(\frac{Z}{a_0}\right)^{3/2} \sigma e^{-\sigma/2} \cos \theta$
	$l = 1,$	$m = \pm 1$	$\psi_{21\pm 1} = \frac{1}{\sqrt{64\pi}} \left(\frac{Z}{a_0}\right)^{3/2} \sigma e^{-\sigma/2} \sin \theta e^{\pm i\phi}$
$n = 3,$	$l = 0,$	$m = 0$	$\psi_{300} = \frac{1}{81\sqrt{3\pi}} \left(\frac{Z}{a_0}\right)^{3/2} (27 - 18\sigma + 2\sigma^2)e^{-\sigma/3}$
	$l = 1,$	$m = 0$	$\psi_{310} = \frac{1}{81} \left(\frac{2}{\pi}\right)^{1/2} \left(\frac{Z}{a_0}\right)^{3/2} (6\sigma - \sigma^2)e^{-\sigma/3} \cos \theta$
	$l = 1,$	$m = \pm 1$	$\psi_{31\pm 1} = \frac{1}{81\sqrt{\pi}} \left(\frac{Z}{a_0}\right)^{3/2} (6\sigma - \sigma^2)e^{-\sigma/3} \sin \theta e^{\pm i\phi}$
	$l = 2,$	$m = 0$	$\psi_{320} = \frac{1}{81\sqrt{6\pi}} \left(\frac{Z}{a_0}\right)^{3/2} \sigma^2 e^{-\sigma/3} (3 \cos^2 \theta - 1)$
	$l = 2,$	$m = \pm 1$	$\psi_{32\pm 1} = \frac{1}{81\sqrt{\pi}} \left(\frac{Z}{a_0}\right)^{3/2} \sigma^2 e^{-\sigma/3} \sin \theta \cos \theta e^{\pm i\phi}$
$l = 2,$	$m = \pm 2$	$\psi_{32\pm 2} = \frac{1}{162\sqrt{\pi}} \left(\frac{Z}{a_0}\right)^{3/2} \sigma^2 e^{-\sigma/3} \sin^2 \theta e^{\pm 2i\phi}$

## Quantum numbers

- Main quantum number  $n$ : Size of wave function
  - $n = 1, 2, \dots$
- Azimutal quantum number  $l$ : number of nodal planes
  - $l = 0$  no nodal plane
  - $l = 1$  one nodal plane
  - $l = 2$ , two nodal planes
  - $l = 0, 1, 2, \dots, n-1$
- Magnetic quantum number  $m$ : distribution in space
  - $m = -l, \dots, 0, \dots, +l$
- Spin quantum number  $s$ : angular momentum
  - $+\frac{1}{2}, -\frac{1}{2}$
